

Chikungunya transmission and population susceptibility in Bahia, Brazil (2015-2025)

Frozen Ceara v4.9 structure, external replication, $q = 0.25$ (FULL, HMC PASS) | case likelihood only

A

Reported cases and posterior prediction

No seed mechanism used (no Bahia gap qualifies -- se

— Model expectation • Observed cases

B

Latent infection incidence

Median, 50% and 95% credible intervals

C

Population susceptibility and immunity

Closed population; LIFELONG immunity; conditional on

— Infection-derived immune — Susceptible

D

Time-varying reproduction numbers

Frozen v4.9 structure: harmonic + year-specific amplitude

— $R_0(t)$ — $R_{eff}(t)$

E

Case ascertainment

q FIXED at 0.25 (not estimated; no Bahia serology -- coi

F

Cumulative infection (immune fraction)

NO serology anchor for Bahia -- not borrowed from Ceara
