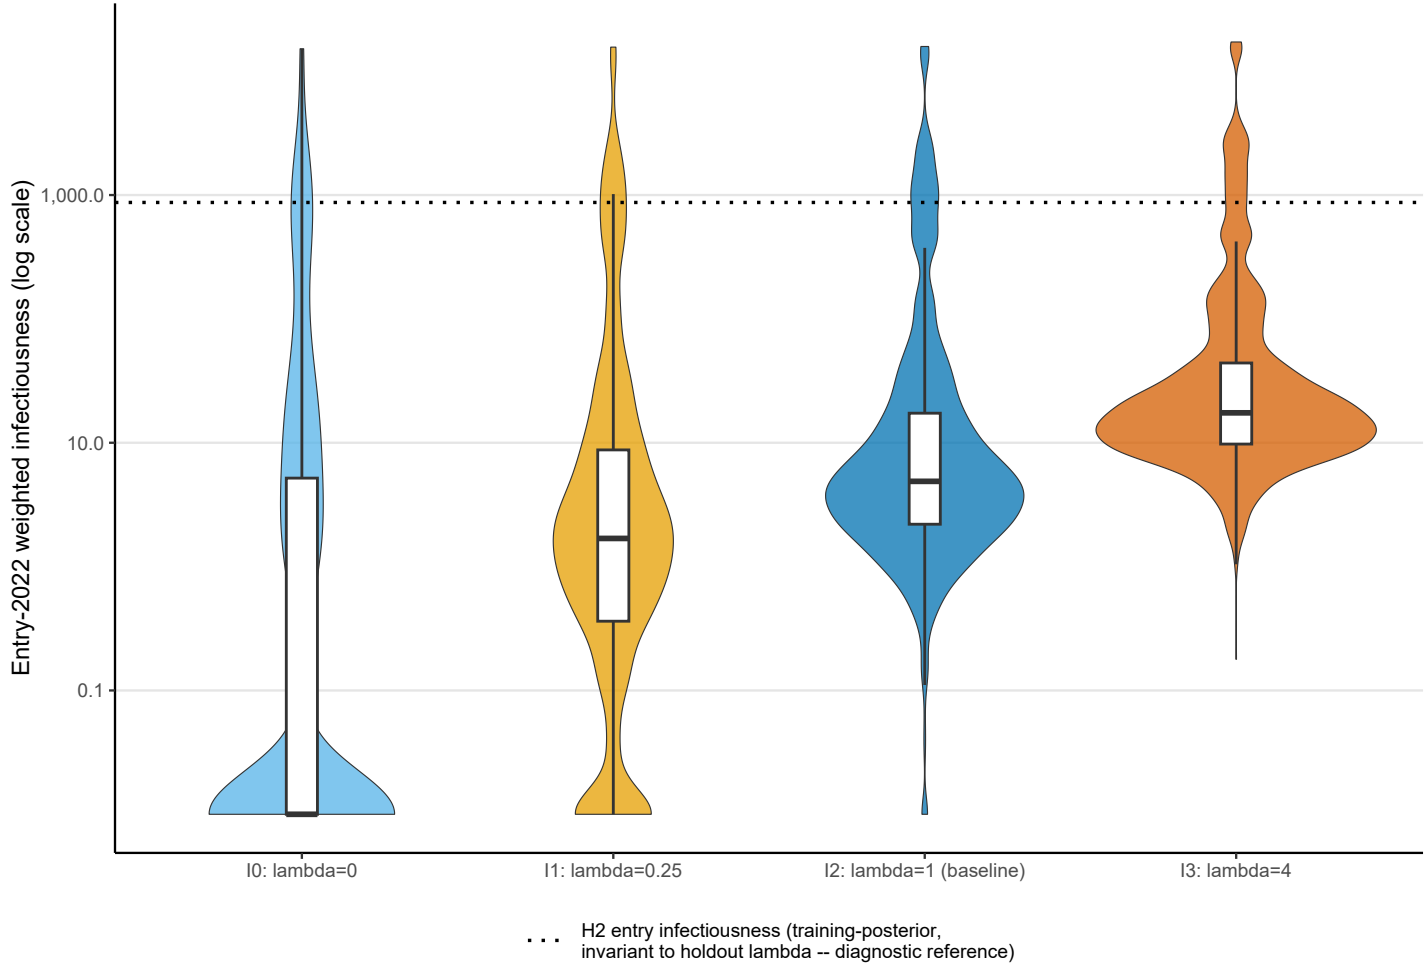

FIG24. Importation intensity vs. entry-2022 weighted infectiousness (H1/G2)

Even lambda=4 (4x baseline) leaves H1 ~50x below H2's real-data-informed entry level.

PROVISIONAL: H1/H2 training-only posteriors have low but nonzero HMC divergences and incomplete within-chain mixing (tau_year upper tail); all results below are conditional on this.
Sensitivity ARMS (diagnostic, prespecified lambda grid), not calibrated model selection -- no lambda is chosen as a new reference.
