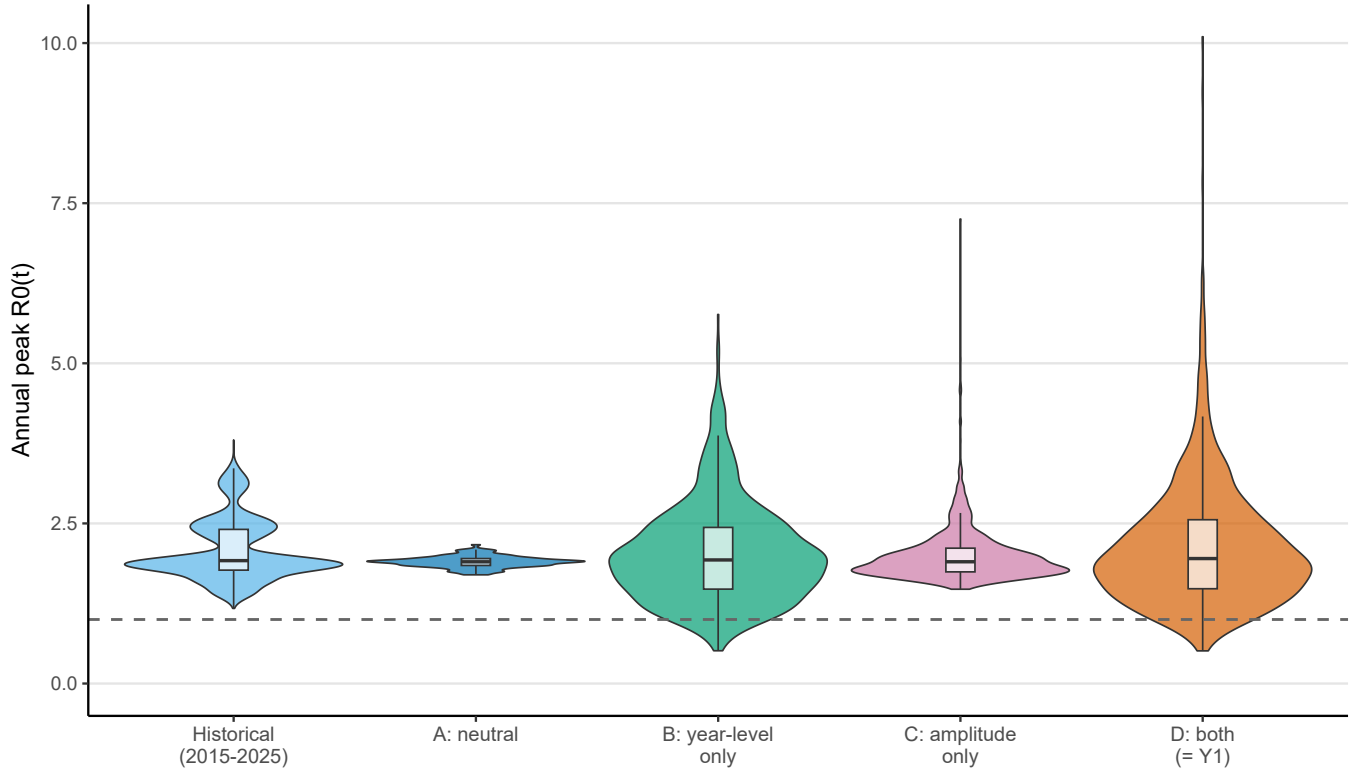

FIG11: Annual peak R0(t) -- four structural arms vs. historical reference

A: year_effect=0,A_year=1 | B: year_effect=Y1,A_year=1 | C: year_effect=0,A_year=Y1 | D: both (=Y1).
Historical: posterior x year pooled (sampled). Arms: 100 draws x 10 future years (C0 climate-neutral, lambda_import=1).

Diagnostic simulation (paired design, common random numbers across arms); not a scenario projection.
